

Henry® Shim Stock and Furring Strips for framing, drywall and trim

Straighten, plumb and align virtually any vertical surface

Henry offers two furring products that make it easy to level the wall surface for trim, case work or cabinet installation.

PhoenixBoard Builders Shim Stock is manufactured from a laminated, heavy duty recycled cylinder board and bundled in an easy-to-handle width, sized 1 3/8" x 45". Installs quickly—just cut to length with a utility knife and apply with nails or a hammer tacker. The consistent thickness speeds application, and PhoenixBoard shims won't compress like corrugated cardboard. Packed 100 per bundle.

Use Henry **Rolled Furring Strips** where flexible material is needed. Manufactured from heavy duty, economical asphalt saturated felt, strips are available in 1/16" thick x 1 5/8" wide in 100' rolls, packaged 5 rolls per bag.

PhoenixBoard Builders Shim Stock and **Rolled Furring Strips** can be applied with staples or nails to fill in low spots on wood framing or to provide additional backing for casework and trim. Multiple layers of progressively longer or shorter lengths can be applied to achieve the desired built-up thickness. Not intended for use in areas exposed to moisture.

Features and benefits

Pre-cut to common stud widths

Easy to handle

Fast installation

Conveniently packaged
