Application

Clean: Clean dirt and loose material from surface. Remove embedded gravel and old roof cement that would interfere with a good bond. Remove rust and scale with wire brush.

1. Apply ¼” to ⅛” thick with a trowel or putty knife. Work into hole and spread 2” to 4” beyond, feathering the edges.

Cartridge: Cut nozzle at angle, puncture inner seal and apply with caulking gun. Work into hole ¼” to ⅛” thick with a trowel or putty knife. Press firmly and spread at least 2” beyond, feathering edges.

2. Reinforce with Henry® 181 or Henry® 183 Roof Repair Fabric if hole is over ¼” wide or 2” long. Henry® roof repair fabric required for 10 year warranty.

3. Cover repair with a second layer of cement. For vertical surfaces in hot weather, use Henry® 204® Plastic Roof Cement or Henry® 505 FlashMaster™ Flashing Cement.

DO NOT THIN. Do not heat container or store at temperatures >110 °F (>43 °C). When transporting, make sure the pail is secured and the lid is tight to prevent spills. CLOSE AIR INTAKES ON ROOF UNTIL SOLVENTS DISSIPATE! May not yield satisfactory results over some APP torch down membranes. Contact Henry® and membrane manufacturer before use. Not recommended for use over gravel, rubber or PVC sheet roofing or wood shingles. To extend repair life, coat with a Henry® roof coating after 30 days.
