**Description**

**Henry DBR50 and DBR100** are water retention and drainage composites. These composites consist of a high-strength dimpled water-retention polymeric core laminated with a top root barrier fabric and bottom protection fabric. The bottom fabric layer provides cushioning properties, offering protection to the underlying waterproofing membrane. Cups or ‘dimples’ in the core offer water storage capacity for vegetation layer between rain events, with overflow drainage once the ‘dimple’ storage capacity is reached. **DBR50** and **DBR100** composites are manufactured with both recycled and prime plastic polymers.

**Features**

- Combined benefits of water retention for plant hydration with bulk water drainage from roof
- Integral root barrier surfacing
- High compressive strength
- Protects underlying roof membrane
- Recycled content, urban heat island benefit and storm water run-off contribute to LEED certification
- Single-source warranty available for all components in the assembly

**Uses**

Combined water retention and drainage composite within vegetative roof assemblies to both retain moisture for plant and media hydration plus allow overflow off the roof through planned drainage. Special coated top layer functions as a root barrier and filter fabric.
Henry DBR50 & DBR100 Water Retention & Drainage Composites with Root Barrier

Application

Unroll and cut to size to cover entire roof surface, butting the core while overlapping side-laps of soil filter fabric to obtain continuous roof coverage and drainage. Make sure water soil filter fabric & storage cups are pointing upward to receive and store water properly. If roof deck has slope, apply shingle fashion starting with first row at bottom of slope working upward to yield a continuous downward drainage system to roof edge, scuppers or drains.

Limitation

Product must be installed with soil filter fabric and drainage cups pointing upward for product to function as water retention composite.

Precaution

Ballast after installation to prevent wind blow-off. Protect from physical damage during media installation of from other trades.
