

How to Avoid Common Green Roof Failures

Henry® Company AIA Accredited Continuing Education Presentation

Course description

Vegetative roofs are often a centerpiece or welcome addition to a building. However, designs that are unable to drain or function effectively can lead to costly repairs, complete replacements, and even early building component degradation. This course reviews typical green roof systems, how to avoid green roof failures, and common repair and replacement procedures when required.

Enjoy an engaged discussion, find out which system is right for your project, and ask project specific questions in the comfort of your office

Learning objectives

- Review vegetative roofing components
- Explore vegetative roofing waterproofing options
- Understand the importance of vegetative free zones and varying stages of maintenance.
- Discuss case studies and learn how to decipher the difference between a repair and when a full green roof replacement is required.

This presentation is a one-hour discussion and qualifies for continuing education credit as recognized by the American Institute of Architects as follows:

Learning unit(s): 1 LU/HSW

Henry Company is a proud member of the American Institute of Architects and offers a variety of accredited continuing education seminars. To schedule a presentation, contact your local Henry representative or visit the Henry Company website at www.us.henry.com/resources/ceu-learning-units.
